LET US ALL RECYCLE !

> PET, one of the most widely recycled plastic in the world. Recycled polyethylene terephthalate is known as RPET and it can be used to make many products including recycled bottles, fibre for polyester bags, fabrics for clothing, and much more. Make the most of our efforts to recycle and reuse all possible waste. This handy 3-in-1 waste bin bag helps to efficiently separate various waste items for recycling and is made of RPET.

Collection

PET bottles are sorted, shredded, washed, impurities are removed and then the plastic is melted and reformed into flakes or pellets.

Processing

The melted pellets can be reused for new injection of items or spun into a thread for fabrics just like virgin plastics or threads.

New RPET products

With the Recycled PET a large variety of new products of equal value can be developed.

› Hemp is one of the oldest and most eco-friendly textile fabrics. It is made from fibres of the fast growing cannabis plant that is naturally pest-resistance and that can grow without the assistance of fertilizers and pesticides. This makes it a 100% organic crop and very environmentally friendly. Not only the production process of the hemp fibers is very sustainable, but also due to the fact that these organic fibers are 100% recyclable.

PRINTING TECHNIQUES

HAVING YOUR LOGO PRINTED WITH THE WIDEST RANGE OF PRINTING TECHNIQUES HAS NEVER BEEN SO EASY. THESE ARE THE MAIN TECHNIQUES USED TO PRINT YOUR LOGO.

SUBLIMATION

SUBLIMATION

Sublimation is one of the few methods you can print full coloured images onto hard surfaces or polyester coated items. Number of colours is unlimited for complete customised logos.

DOMING

The doming procedure consists of printing the logo on a self adhesive label domed with an epoxy resin layer. It is a durable solution and cannot be easily scratched or dented.

DIGITAL LABEL

Digital Label is used on items where no other technique can be applied. With his method full colour label is printed and stuck on the most optimum position of the product.

DIGITAL PRINTING

Digital printing is done by placing the product under a four-color digital printer. Compared to the conventional technique it is a more environmental friendly solution.

DIGITAL INLAY

Digital inlay is a piece of paper, printed on a four-colour xerographic printer which offers photographic image quality and sharp text, it is then placed in the selected print template position.

BUTTON

The print is carried out prior to assembly of the item. This allows for a full customised design.

DIGITAL TRANSFER

Digital Transfer is one of the most popular methods for full colour logos and designs. This Four Colour Process hits over thousands of colours resulting in a photographic quality decoration.

SCREEN TRANSFER

Economic option for simpler designs. The logo is printed on a sheet by means of serigraphy (which allows 1 to 8 colours) and then transferred to the product.

CERAMIC TRANSFER

The technique of ceramic transfer printing is applied to ceramic promotional cups and items where the logo is printed on a sheet and transferred by water.

SCREEN PRINTING

Main advantage of screen printing is the unique result you can achieve. It can be applied on a variety of materials but mostly used on fabrics since a larger size can be achieved.

PAD PRINTING

Pad printing is a technique where rubber stamps are used to print the logo on the item. With this technique you achieve a sharper finish and a perfect colour matching (PMS) is achievable.

ROUNDSCREEN

Round screen printing is a method that allows round personalisation. It is an optimum solution for the popular reusable bottles since, due to its form, the print position is larger than can be achieved using the traditional printing method.

EMBOSSING

Embossing is a popular technique for marking products made of leather, PU or cardboard. The logo is stamped on the material being sunk and making it indelible.

EMBROIDERY

Embroidery is a very popular technique in products such as caps, textiles or advertising bags where the finishing touch is in the sewn logo with woven threads.

LASER ENGRAVING

Laser engraving can be applied to items made of natural materials like wood and metals. With laser engraving the result of branding is precise, clean and permanent.
